(a) (x_1, x_2)-window, side $12N^{-1/2}$
$(x_1 - 0.37)\sqrt{N}$
$(x_2 - 0.41)\sqrt{N}$
$h/|h|^2$
(b) $h = (-283, 287)$: $|S(h)| = 0.78$, occupied arc 0.573
density (all N points)
$h \cdot x - \phi_0 \bmod 1$
$E = \frac{10}{17}$
uniform
points of the projection
predicted band boundaries
predicted empty strips
